NAME: CLAYBORNE, KAREN
PHYS: Shih, Alvin M DO
DOB: 01/11/1966 AGE: 60 SEX: F
ACCT: K509976683 LOC: K.327 1
EXAM DATE: 05/24/2026 ST: ADM IN
UNIT NO: K00395352
EXAM COMPLETE: 1150

EXAMS:

001136629 MR Brain wo/w Con

MR BRAIN WITHOUT THEN WITH IV CONTRAST

DATE: 5/24/2026

HISTORY: Reason for Exam? AMS, dysarthria, ataxia DX: DYSARTHRIA
Comment? hx brain lesions (K509976683)

TECHNIQUE: MR examination of the brain was performed without then with intravenous contrast per the routine protocol.

COMPARISON: 5/23/2026

FINDINGS:

Multiple enhancing intraparenchymal masses are identified. The largest is seen in the inferior vermis in the posterior fossa measuring 3 x 2.4 cm. In the inferior medial aspect of the left cerebellum is a 1.6 x 2.1 cm mass. Several other smaller subcentimeter masses are seen in the bilateral cerebellar hemispheres. There are also multiple parenchymal masses seen throughout the bilateral frontal and parietal lobes. Imaging characteristics are consistent with parenchymal brain metastases.

No restricted diffusion to suggest acute ischemia. There is associated mass effect seen in the bilateral cerebellar hemispheres from the metastatic lesions. There is effacement of the dorsal aspect of the fourth ventricle. No acute ventriculomegaly.

Mild white matter small vessel ischemic disease. The ventricles are normal in size.

No acute intracranial hemorrhage. No abnormal extra-axial fluid collection. Major intravascular flow voids are intact. The orbits are unremarkable. The paranasal sinuses are clear. The mastoids are clear.

IMPRESSION:

Findings consistent with multiple parenchymal brain metastasis. The largest is seen in the inferior vermis and cerebellum. There is associated vasogenic edema seen within the bilateral cerebellar hemispheres without change foramina herniation. These findings were phoned to nurse Laura on the day the study at 12:30 PM.
